Abhishek Singh

Security Researcher at Microsoft | Mentoring at Topmate | Public Speaker

Noida, Uttar Pradesh, India

Summary

With over 6.8 years of expertise in Cybersecurity, Cloud Security, and Information Security, I specialize in threat hunting, detection engineering, penetration testing, & incident response. As a Cybersecurity Researcher at Microsoft, I am expert in Microsoft Defender (M365D, XDR) and frameworks such as MITRE ATT&CK, D3FEND, and SHIELD Active Defense to secure complex environments and mitigate risks proactively.

I excel in designing detection rules, configuring ASR rules, and developing custom watchlists for SIEM/EDR platforms, including Azure Sentinel, Splunk, ELK Stack, and Carbon Black by VMware. Skilled in cloud security operations across Azure, AWS, and Google Cloud, I bring hands-on expertise in malware analysis (static and dynamic), Windows/Android forensics, and creating automation workflows using Python, KQL, and Power FX.

I conduct penetration testing, assess vulnerabilities, & investigate incidents to deliver actionable insights. By designing and implementing proactive threat hunting programs, I contribute to cross-product detection workflows

Objective

To secure a technical/leadership role in cybersecurity, leveraging my expertise in cloud security, penetration testing, and detection engineering to drive impactful security strategies, and innovate in threat detection and response

Education and Certifications

- Postgraduate Diploma in Cybersecurity, IIT Guwahati (Cloud Security, Malware Analysis, AI/ML in Cybersecurity)
- B.Tech in Computer Science, Lovely Professional University (Cyber Security)

Certifications:

- COMPTIA Security+ and Cloud+
- NetWitness Incident Responder

- Certified Blockchain Developer
- Python Developer (UHG)

Key Skills

- Threat Hunting & Detection Engineering (Detection Rules, Rule Optimization)
- Penetration Testing & Vulnerability Assessment
- Cloud Security Operations (Azure, AWS, GCP)
- SIEM/EDR Expertise (Azure Sentinel, Splunk, Carbon Black)
- Automation & Programming (Python, KQL, Power FX)
- Incident Response & Mitigation

Achievements and Projects

- SecurText: Developed an LLM-based incident investigation tool using ChatGPT to generate concise summaries
- 5-Day Threat Hunting Program: Designed a structured framework for proactive threat detection using Elastic
- IOC Categorization Automation: Automated IOC submission workflows using Python, saving hours for SOC teams

Personal Attributes

Passionate about advancing cybersecurity practices and mentoring professionals, I strive to stay ahead of industry trends. Outside of work, I enjoy sci-fi movies, photography, and exploring new cultures to foster creativity and innovation

Experience

Microsoft

Security Researcher II | Threat Hunter 2 (M365 Defender Expert)

October 2022 - Present (4 years)

Noida, Uttar Pradesh, India

As a Microsoft researcher involved in Threat Hunting, Incident Response, and M365 Defender, I specialise in proactive identification and mitigation of security threats. My expertise spans Microsoft products like MDI, MDO, MDA, and MDE.

- Proactive identification and mitigation of security threats across Microsoft products like MDI, MDO, MDA, and MDE.

- Customer onboarding entails setting up infrastructure for Defender agents, Office, Endpoint, and Azure security solutions.
- Configuration of ASR rules for attack surface reduction and noise reduction.
- Managed remediation based on rubric matrix.
- Oversight of Azure Active Directory security, cloud environment setup, and threat hunting for true positives.
- Building models for Security Copilot, engaging in core testing, and contributing to XDR research.
- Investigation of pre and post-alert activities, focusing on behavior analysis.
- Crucial documentation of investigations and findings, including summary, grading justification, and incident reports.
- Utilization of dashboards in Azure Data Explorer and Power BI for incident tracking and reporting.
- Regular communication with customers, including incident report summaries and resolution of queries.
- Development of automation rules to match incident grades and reduce noise.
- Weekly precision hunting based on TTPs and emerging threats.
- Manual case creation involving traps for future use cases.
- Utilization of Rule Engine or T0 Rules to suppress noise in customer environments.
- Emphasis on documenting findings to provide a clear picture of the analysis performed and completeness of the investigation.
- Capture crisp and short summary of the case (The story observed at triage level, without much deep investigation)
- Capture justification of the Grading done (TP/FP/BP)
- In case of case incident criticality whenever sending a Guided Response email containing the crisp incident report in addition to mitigation steps with scoping.

Crowe

Cyber Security Analyst Managed Detection and Response (MDR)

January 2022 - October 2022 (10 months)

Noida, Uttar Pradesh, India

- Monitoring, detecting, and responding to alerts with Carbon Black ensures robust endpoint security, including ransomware and malware protection, as well as facilitating threat hunting and incident response.
- Crafting Executive Summaries for global clients enhances security architecture consultation, effectively mitigating threat vectors and associated risks.

- Utilizing SIEMplify for Security Orchestration, Automation, and Response, I develop playbooks and use cases to efficiently detect and respond to threats.
- Analyzing ELK logs prioritizes threat activity for swift mitigation, with client escalation and WarRoom engagement for severe threats.
- Checking and Monitoring Flow Logs, Win Logs, EDR, and Firewall Logs maintains business continuity, with use case development and false positive whitelisting.
- Performing threat hunting and analysis based on Carbon Black, Anomali, Elastic, and O365 tools, prioritizing based on MITRE ATT&CK TTP and threat reports.
- Email gateway management with Agari Phishing Defence and Brand Protection fortifies phishing defense.
- Creating MITRE ATT&CK-based metrics for clients aids in mapping threat actors and identifying common APTs and software involved in current threat scenarios.
- Collaborating closely with clients to promptly remediate identified threats, initiating quarantine measures and asset triaging in our War-Room environment.
- Fine-tuning alert portals in THE Hive enhances our response capabilities, while developing custom watchlists for Carbon Black MDR ensures proactive threat mitigation.
- Managing firewall portals Opensense and Pfsense integrated with Suricata IDS.
- Email gateway management with Agari Phishing Defence and Brand Protection fortifies our clients' defenses against phishing attacks.
- Creating MITRE ATT&CK-based metrics enables us to provide comprehensive insights into threat actor behaviors, aiding in proactive threat mitigation strategies and bolstering our clients' cybersecurity posture.

UnitedHealth Group

Associate Cyber Security Analyst

March 2021 - January 2022 (11 months)

Noida, Uttar Pradesh, India

- Identifying, prioritizing and mitigating various cyber security threats such as phishing, vishing/smishing, malware, job scams, 419 scams, campaigns and malicious mobile applications.
- Analysing email headers to check the legitimacy of emails.
- Performed the basic malware analysis test with dynamic analysis tool and Isolated Environment.

- Determining and contacting parties responsible for hosting malicious content in order to get threat shutdown and collect evidence.
- Minimized false positive alerts by tuning some existing rules that were triggering the alerts
- Created Splunk dashboards for several use cases.
- Used Splunk to check for IOCs like Emails, Hashes, URLs, IPs, Domains from global campaigns in our environment.
- Refined existing queries to generate events of interest for Windows abnormal login activity
- Used MITRE ATT&CK Framework to present step-by-step attack techniques of security incidents/campaigns'
- Used Prisma for deep analysis on cloud alerts related to AWS and Azure.
- Investigated cloud-based alerts on Azure using Sentinel.
- Investigation of emails using Microsoft 365 defender, Cisco Ironport, and Agari.
- Used Microsoft defender to monitor/mitigate host-based alerts.
- Escalated various high priority incidents to Incident Response team which arose during my shift
- Used FireEye Hx endpoints while investigating host-based alerts.
- Used RSA Netwitness for network inspection.
- Creating Splunk dashboard for real time monitoring of threats.
- Creating alarms on Splunk based on certain metrics.
- Detecting malware on webpages domains and documents, thus minimizing the potential business impact from cyber attacks
- Analysis of New and Dropped Domains reported in incidents. Escalating the Suspicious Domains to internal Automated tool.
- Risk assessment by identifying and analysing potential events that may negatively impact assets or the client environment.

Quick Heal

Information Security Analyst Trainee

July 2019 - February 2021 (1 year 8 months)

New Delhi Area, India

- Investigating all the attacks like Social Engineering, Phishing, Spam, etc., and making the report with all the analysis, recommendations.
- Blocking all the IOC's used for the attacks on individual Tools, both network and endpoint.
- Working on all the Platforms, Next-Generation firewalls, Endpoint detection and response tools and sand boxing tools.

- Building Malware signatures based on the collected data from the client endpoints.
- Proven technical experience in windows forensics, memory forensics.
- Developed in house training courses for quick heal academy.
- Worked on Sysinternals utility to manage diagnose and monitor the environment, Process Monitor, Sysmon, TCP View etc,.

Swisto

11 months

Internship - Security Web

January 2019 - July 2019 (7 months)

Jalandhar Area, India

- Worked as a full time at SWIST Food Delivery and Grocery Startup under 10 months of Application Testing and Delivery program, performing Penetration Testing, Application Security, and Secure Code Review modules.

Web Developer Trainee

September 2018 - January 2019 (5 months)

Jalandhar, Punjab, India

Teach Tech Services

Partime - Trainer

July 2018 - July 2019 (1 year 1 month)

Jalandhar Area, India

- Worked as a Full Time trainer for Teach tech Services and conducted various training on
- Penetration Testing and Ethical hacking
- Ethical Hacking beginner to Advanced
- Certified Cyber Security Expert
- Digital Forensics an Investigator Guide
- Security Operation Center Running the SOC Business

Education

Indian Institute of Technology, Guwahati

Post Graduation Advance Certification Program, Cyber Security · (August 2024 - September 2025)

Lovely Professional University

Bachelor of Technology (B.Tech), Computer Science and
Engineering · (2015 - 2019)

GIC Inter College

Intermediate, Physics, Chemistry, Maths · (2011 - 2013)

SMUV High School, Jalaun

High School, Science · (July 2010 - July 2011)
